### **Post-doc position available to study the fungal pathogen *Candida glabrata***

A postdoc position is immediately available at the **Institute of Microbiology (IMUL)** of the University of Lausanne and University Hospital Center to investigate the response of the fungal pathogen *Candida glabrata* in animal models. This fungal pathogen develops rapidly resistance to current antifungal drugs, which intriguingly increases its fitness *in vivo* (1). The project is funded for three years (2017-2020) by the **Swiss Research National Foundation**. The project will use several omics approaches to address how *Candida glabrata* respond to host conditions with and without the presence of antifungal drugs. The candidate should possess good skills in Microbiology and Molecular Biology. Experience in bioinformatics, mammalian cell cultures and animal models will be an advantage but not a prerequisite for the application. Applicants can send a CV, a letter of motivation and 3 letters of recommendation to:
